

PAIRing Up to Address Neuropsychiatric Concerns in Parkinson's Disease (PD)

People with PD and care partners are invited to participate in online surveys for research

This survey aims to learn about the needs and priorities for clinical care, education, support, and research as related to neuropsychiatric symptoms in Parkinson's disease (PD). We would like to obtain feedback and information from people living with PD or from those caring for someone living with PD (e.g., spouses, relatives, friends, or paid caregivers) on these topics.

Some people with PD experience motor (tremor, slowness, walking) and non-motor symptoms. Some of these non-motor symptoms include those that affect thinking and memory (cognition), mood (depression, anxiety), and behavior. These features are often called neuropsychiatric symptoms.

While not every person with PD will experience these symptoms, it is important for healthcare professionals to learn about people's experiences, concerns, or hopes regarding these topics.

Your feedback will help the healthcare community and other people with PD or their care partners understand people's experiences or concerns about these topics as well as what types of clinical care, education, support, and research is needed in the field.

Participants in this study will fill out anonymous online surveys.

The surveys were developed with input from an advisory group, which included people with PD, care partners of people with PD, and healthcare professionals.

- If you have any questions, please contact Dr. Jennifer Goldman's research team at (312) 238-5911 or dmerkitch@sralab.org
- Code name: PAIR study

IRB Project #: STU00213530
Principal Investigator: Jennifer G Goldman, MD, MS

You may be eligible to participate if you:

- Are a person with PD
- Are a care partner of someone with PD
- Live in the US or US Territories
- Have a computer, smart phone, iPad or similar device with internet connectivity
